

Luna Work
TRAVELGENIX CRM

The complete user guide

Everything you need to run your travel agency on Luna Work — set-up, every screen, and the tips that get the most out of it.

Contents

A two-minute read per section. Start with Getting started, then dip into any feature as you need it.

1 · Getting started	Sign in, data, the tour, finding things fast
2 · Dashboard	Your morning briefing and the day at a glance
3 · Customers & smart segments	Find, group and act on customers
4 · Customer 360	The full record, brief, predictions and actions
5 · Inbox	Triage and reply with ranked drafts
6 · Trips pipeline	The Kanban board from enquiry to returned
7 · Journeys (auto-pilot)	Rules that do the follow-ups for you
8 · Tasks	The work queue
9 · Reports	Revenue, pipeline and behaviour
10 · Settings	Workspace, team, AI and compliance
11 · Luna AI & how to trust it	What's automated and what isn't
12 · Keyboard shortcuts	Move at speed

1 Getting started

Luna Work is your travel-native CRM. Luna, the built-in AI, reads your inbox, briefs you on every customer, suggests the next move and runs the routine follow-ups. You stay in control: Luna drafts and queues, you approve and send.

Signing in & your workspace

- Open your Luna Work URL. You land on the **Dashboard**.
- The left **sidebar** is your map: Dashboard, Inbox, Customers, Trips, Journeys, Tasks, Reports, and Settings at the bottom.
- Toggle **light / dark mode** with the sun/moon button in the bottom-left.

Getting data in

1. **Just exploring?** Open **Customers** and click **Seed demo data** to load 30 realistic sample households so every screen has something to show.
2. **Going live?** Add your own customers instead, and clear the demo data once you're ready for real records.

The guided tour

The first time you open Luna Work, a short **step-by-step tour** walks you through set-up and every screen. You can reopen it any time from **Take a tour** at the bottom of the sidebar.

Two ways to move fast

Quick find

- Press **Ctrl / ⌘ + P**, or click **Quick find** at the top of the sidebar.
- Jump straight to any customer, trip or page.

Ask Luna

- The glowing button bottom-right (**Ctrl / ⌘ + K**).
- Ask in plain English: "Who's travelling next month?", "How much have we booked this year?"

Tip: Ask Luna understands your real data. Try "Who's going to Spain?" or "Show me high-value customers who've gone quiet" and click straight through to the records.

2 Dashboard

Your home screen and daily starting point. It answers one question: what needs me today?

What you'll see

- **Morning briefing** — a single sentence summarising messages that need you, imminent departures and live enquiry value.
- **KPIs** — customers and lifetime value, live pipeline, departures in the next 7 days, and what needs you today. Each tile is clickable.
- **Pipeline by stage** — value sitting in each stage of the trip pipeline.
- **Departures & travelling** — who's away now and who leaves soon.
- **Needs you today** — the urgent inbox items, straight from Luna's triage.
- **Luna on auto-pilot** — what your journeys did in the background.

How to use it

1. Read the briefing line first — it's your to-do list in one sentence.
2. Click **Needs you today** or any KPI tile to jump straight to the work.
3. Glance at the auto-pilot strip to see what Luna handled while you were away.

Tip: Make the Dashboard your first stop each morning. If the briefing says "nothing urgent", that's your cue to chase quotes or re-engage past travellers.

3 Customers & smart segments

Your customer list, with a search box that understands plain English. Describe who you want and Luna builds the filter.

Finding the right people

1. Type a description in the smart bar, e.g. *"families who went to Greece and have gone quiet"*, and press Enter.
2. Luna turns it into **filter chips**. Remove a chip to widen the search, or click **Clear** to reset.
3. Use the **saved segment** chips for one-click common views (travelling now, high-value couples, and any you save).
4. Use the plain text box to filter the visible list by name or city.

Acting on a group

- **Email all** — opens a pre-addressed email draft to everyone in the current view.
- **Add to journey** — enrol the group into an auto-pilot journey.
- **Save segment** — name the search and pin it as a reusable chip.
- **Select rows** (the checkboxes) to act on a specific subset: Email selected, Add tag, Draft outreach.

How to use it

1. Search, refine with chips, then either click a customer to open them or act on the whole group.
2. Found a view you'll want again? **Save segment** so it's one click next time.

Tip: Segments are the engine room of proactive selling. Save "Booked 18+ months ago, no contact" and work it once a week — that's repeat business most agencies leave on the table.

Set-up note: Saving segments needs the segments table enabled in your database (a one-time migration). Until then everything else works and Save segment will tell you what to run.

4 Customer 360

Everything about one household on a single page — history, intelligence and the next move.

What's on the page

- **Luna's brief** — a short, plain-English summary of who they are and how they book.
- **Predictions** — rebooking opportunity, a trip-match idea, and a risk read (passports, compliance). The numbers are computed from real data, not guessed.
- **Timeline** — every email, chat, call and note in one thread.
- **Luna · Next steps** — the best actions right now, each with a **Do** button.
- **Trips, household, preferences and compliance** panels down the right.

Actions you can take

Button	What it does
Refresh brief	Regenerates Luna's brief and predictions from the latest data.
Draft a reply	Opens the inbox focused on their most recent message, ready to reply.
Add note	Adds an internal note that appears in the timeline.
Schedule call	Creates a follow-up task (and opens your booking page if configured).
Next steps · Do	Performs the suggested step — creates the task or opens the reply.

How to use it

1. Open a customer, read the brief and the next steps — that's your 10-second catch-up.
2. Work the next steps top-down with the **Do** buttons.
3. After a call or change, click **Add note** so the next person sees the full picture.

Tip: Before any call, open the record and skim the brief and timeline. Mentioning their last trip or a child's name by memory is what turns a booking into a relationship.

5 Inbox

Every inbound message, triaged by Luna and ready to answer — with reply options written for you.

Triage lanes

- Luna sorts messages into **Today**, **This week**, **Later** and **All**, with a one-line reason for each.
- Work the **Today** lane first — those are the ones that move money or matter most.

Replying

1. Select a message. The middle pane shows the full email and Luna's read of it.
2. Below it sit **ranked reply drafts**, each with a one-line rationale for the trade-off it makes.
3. Switch between drafts, then **Send as is**, **Edit before sending**, or click **Draft with Luna** to generate fresh options grounded in that customer's record.
4. The right pane is a mini customer card — context without leaving the inbox.

Tip: The drafts are deliberately different in tone, not three versions of the same thing. Pick the one that fits the relationship — the rationale tells you what each one prioritises.

6 Trips pipeline

A Kanban board of every trip, from first enquiry to safely returned, so nothing stalls.

The stages

Enquiry → Quoted → Booked → Pre-departure → Travelling → Returned. Cancelled trips are kept out of the pipeline but reachable via the toggle.

How to use it

1. **Drag a card** between columns as a trip moves forward. On touch or keyboard, use the stage dropdown on each card.
2. Read the **column totals** to see how much value is sitting at each stage.
3. Click a card to open the customer behind the trip.

Tip: A healthy board has movement every day. If cards pile up in Quoted, that's your follow-up list — pair it with a journey so Luna chases them automatically.

7 Journeys (auto-pilot)

The heart of "AI doing the work nobody has time for". A journey is a rule: when something happens, Luna does a follow-up.

Getting started

1. Open **Journeys** and click **Install starter journeys** to add four proven rules.
2. Each card shows its trigger, its action, and how many customers are **eligible right now**.
3. Click **Run now** on a journey (or **Run all active**) to act on the eligible customers.
4. **Pause** any journey you don't want running.

The starter journeys

Journey	When it fires	What Luna does
Pre-departure check-in	10 days before departure	Creates a task to confirm details & passports
Welcome home	3 days after return	Drafts a warm welcome-home email
Passport expiry warning	Passport within 6 months of expiry	Creates a task to flag it
Re-engage quiet customers	No contact for 12 months	Drafts a re-engagement email

The **What Luna has done** feed logs every action. Drafts are marked **awaiting review** — they never send on their own.

Tip: Turn journeys on one at a time and watch the activity feed for a few days. Once you trust a journey, leave it running and let it quietly protect your repeat revenue.

Good to know: Running a journey twice never doubles up — Luna remembers who it has already actioned.

8 Tasks

Your single work queue. Everything Luna queues from journeys — plus follow-ups you create — lands here.

How to use it

1. Open tasks are bucketed by due date: **Overdue**, **Today**, **This week**, **Later** and **No date**.
2. Tick the checkbox to **complete** a task, or **Snooze** it (it returns in three days).
3. Switch the filter to **Snoozed**, **Done** or **All**. Reopen anything you need back.
4. Tasks created by a journey carry a badge and link straight to the customer.

Tip: Clear Overdue and Today every morning and the rest of the CRM stays honest. The Dashboard's "needs you today" count includes these.

9 Reports

The numbers that matter, computed live from your trips and customers.

What's covered

- **Headline figures** — booked revenue, open pipeline, bookings and average booking value.
- **Pipeline & conversion** — where value sits and how it flows through the stages.
- **Revenue by destination** and **source attribution** — what sells and where it comes from.
- **Business health** — revenue trend, new vs repeat, customer value bands and lead time.

How to use it

1. Flip the range between **This year**, **Last 12 months** and **All time** — it updates instantly.
2. Use source attribution to decide where your next marketing pound goes.

Tip: Watch new-vs-repeat over time. Growing repeat share is the clearest sign your journeys and follow-ups are working.

Your workspace, your team, and how Luna behaves.

- **Workspace** — agency name, brand colour, region and plan.
- **Team** — the people with access and their roles.
- **Luna AI** — the house style Luna always writes in (UK English, warm, direct, no filler) and which feature each model powers.
- **Integrations** — connection status for your database, the AI engine and hosting.
- **Compliance & data** — live GDPR consent, marketing opt-in and passport-expiry figures across your customers.

Tip: Check the Compliance panel before any marketing send — it shows at a glance how many customers have consented.

Luna is built to be helpful and safe. Here's exactly what's automated and what always waits for you.

The rules Luna follows

- **It never invents facts.** Briefs, drafts and suggestions use only the data on file. If Luna doesn't know something, it leaves it out rather than guessing.
- **Numbers are computed, not guessed.** Risk and opportunity scores come from real arithmetic on real fields, so you can rely on them.
- **Nothing sends itself.** Luna drafts and queues; a human reviews and sends. Journey emails sit as drafts marked "awaiting review".
- **It writes in your voice.** UK English, warm and direct, no marketing filler.

What needs to be switched on

- Live AI (briefs, reply drafts, Ask Luna, smart segments) needs an AI key configured on your deployment. Without it, the app still runs and falls back to prepared content.
- The Settings → Integrations panel shows you exactly what's connected.

Tip: Treat Luna like a brilliant new colleague: let it do the first draft and the legwork, and bring your judgement to the final send. That combination is where the time savings come from.

Shortcut	Action
Ctrl / ⌘ + P	Open Quick find (jump to any customer, trip or page)
Ctrl / ⌘ + K	Open Ask Luna
↑ ↓ then Enter	Move through results and open
← →	Move through the product tour
Esc	Close any overlay (tour, palette, Ask)

A simple daily rhythm

1. Open the **Dashboard** and read the briefing.
2. Clear the **Today** inbox lane and any overdue **Tasks**.
3. Glance at **Trips** for anything stalled in Quoted.
4. Once a week, work a saved **segment** of quiet past customers.
5. Let **Journeys** handle the routine in the background.

Luna Work — Travelgenix CRM · User guide v1 · Reopen the in-app tour any time from “Take a tour” in the sidebar.
