

Luna Work
TRAVELGENIX CRM

The complete user guide

Everything you need to run your travel agency on Luna Work — set-up, every screen, worked examples, tips, an FAQ and a glossary, plus a quick-start for every role.

Contents

Read “Getting started” and the quick-start for your role, then dip into any feature. Every feature section has a labelled figure, step-by-step instructions, a “Good to know” box and top tips. New to a task? Jump to **Common workflows** or the **FAQ**.

Where to start — by role	Owner/Manager · Consultant · Admin
1 · Getting started	Sign in, navigation, data, the tour, finding things
2 · Dashboard	Your morning briefing and the day at a glance
3 · Customers & smart segments	Find, group and act on customers
4 · Customer 360	The full record, brief, predictions and actions
5 · Inbox	Triage and reply with ranked drafts
6 · Trips pipeline	The Kanban board and what each stage means
7 · Journeys (auto-pilot)	Rules that do the follow-ups for you
8 · Tasks	The work queue
9 · Reports	Revenue, pipeline and behaviour
10 · Settings	Workspace, team, AI and compliance
11 · Luna AI & Ask Luna	What it does, its limits, example questions
12 · Common workflows	Step-by-step recipes for everyday jobs
13 · Top 10 tips	Power moves for the whole team
14 · FAQ & troubleshooting	Answers to the questions people ask first
15 · Glossary	Plain-English definitions of every term
16 · Keyboard shortcuts	Move at speed
A–Z index	Every feature and where to find it

Where to start — by role

Luna Work suits the whole agency. Find yourself below for the fastest path to value. Page references point to the numbered sections.

Owner / Manager

You care about revenue, the team's output and nothing slipping through.

- Start each day on the **Dashboard** (§2) — the briefing line is your pulse.
- Set up **Journeys** (§7) once — they protect repeat revenue on auto-pilot.
- Check **Reports** (§9) weekly; watch the new-vs-repeat trend.
- Use **Settings** (§10) for team and compliance before any campaign.

Travel consultant / Agent

You live in the inbox and on the phone, turning enquiries into trips.

- Clear the **Inbox** Today lane (§5) — reply with the ranked drafts.
- Open the **Customer 360** (§4) before every call; read the brief and next steps.
- Keep the **Trips** board (§6) moving; chase anything stuck in Quoted.
- Work your **Tasks** (§8) — overdue and today — to zero each morning.
- Once a week, run a saved **segment** (§3) of quiet past customers.

Administrator / Operations

You keep the workspace healthy, compliant and set up correctly.

- Own the **set-up checklist** (§1) — data, the optional AI key, the segments migration.
- Monitor **Settings** → **Compliance** (§10) — consent, marketing opt-in, passports.
- Keep **Journeys** (§7) tidy: pause what's not needed, review the activity feed.
- Use **Reports** (§9) to pull figures for management.

New starter? Whatever your role, take the in-app tour first (sidebar → **Take a tour**), then read §1 and your role box. You'll be productive inside ten minutes.

1 Getting started

Luna Work is your travel-native CRM. Luna, the built-in AI, reads your inbox, briefs you on every customer, suggests the next move and runs the routine follow-ups. You stay in control: Luna drafts and queues, you approve and send.

The Luna Work workspace — sidebar navigation, with the Dashboard open. Illustrative figure.

Finding your way around

- The left **sidebar** is your map: Dashboard, Inbox, Customers, Trips, Journeys, Tasks, Reports, with Take a tour and Settings at the bottom.
- Each page opens with a **top bar** showing the page title and the main action for that screen.
- **Light / dark mode:** the sun/moon button at the bottom-left of the sidebar. Your choice is remembered on that device.
- **On a phone or tablet:** the sidebar collapses to a menu button (top-left). Tap it to open the navigation drawer.

Getting data in

1. **Just exploring?** Open **Customers** and click **Seed demo data** to load 30 realistic sample households so every screen has something to show.
2. **Switching from another CRM or a spreadsheet?** Open **Customers** → **Import CSV** and drop your export in. **Luna reads the columns and maps them for you** — any column names, any order — you just check the preview and click import. Duplicates are skipped automatically, so re-running a file is always safe.
3. **Adding one customer?** Use **Add customer** in the Customers top bar.

The guided tour & finding things fast

Take a tour

- Auto-opens on first visit; reopen any time from the sidebar.

Quick find & Ask Luna

- **⌘/Ctrl + P** — jump to any customer, trip or page.
- **⌘/Ctrl + K** — ask Luna a plain-English question.

- Walks you through set-up and every screen with deep links.

GOOD TO KNOW

Quick find vs Ask Luna. Quick find is a *navigator* — it jumps you to a record or page by name. Ask Luna is an *analyst* — it answers questions about your data (“who’s travelling next month?”) and shows clickable results. Use Quick find to *go somewhere*, Ask Luna to *find something out*.

One-time set-up checklist (admin)

Step	Why it matters
Database connected (3 keys)	Powers all data. Already done if pages load with customers.
Run the schema	Creates the 14 core tables. Done once at setup.
Run the segments migration	Enables Save segment (\$3). One extra script.
Add an AI key (optional)	Turns on live briefs, reply drafts, Ask Luna & smart segments.
Add a booking URL (optional)	Makes “Schedule call” open your calendar page.

Tip: Everything runs without the AI key — Luna falls back to prepared content — so you can go live first and switch AI on whenever you’re ready.

2 Dashboard

Your home screen and daily starting point. It answers one question: what needs me today?

Dashboard — briefing, KPIs, pipeline and what needs you today. Illustrative figure.

How to use it

1. Read the briefing line first — your to-do list in one sentence.
2. Click **Needs you today** or any KPI tile to jump straight to the work.
3. Glance at the **Luna on auto-pilot** strip to see what journeys handled overnight.

GOOD TO KNOW

Every tile is a live figure, recalculated each time you open the page, and every tile is clickable — it takes you to the matching screen already filtered. The **auto-pilot strip** only appears once your journeys have done something, so an empty strip simply means nothing has run yet.

Top tip: If the briefing says “nothing urgent”, that’s your cue to be proactive — chase a quote or work a re-engagement segment.

3 Customers & smart segments

Your customer list, with a search box that understands plain English. Describe who you want and Luna builds the filter.

Customers — a natural-language segment with filter chips and group actions. Illustrative figure.

Finding & acting on people

1. Type a description in the smart bar and press Enter — Luna turns it into filter chips.
2. Remove a chip to widen the search; use the saved-segment chips for one-click views.
3. Act on the group: **Email all**, **Add to journey**, **Save segment**, or tick rows for **Email selected / Add tag / Draft outreach**.
4. Click any customer to open their full record.

What you can filter on

You can ask for...	Try phrasing it like
Destination they've travelled to	"been to Greece", "Italy lovers", "Maldives"
Household type	"families", "couples", "solo travellers"; "with kids" → families
Value (lifetime spend)	"over £20k", "high value", "VIPs", "big spenders"
Recency / dormancy	"gone quiet", "no contact in 12 months", "booked in the last 6 months", "booked in 2024"
Trip status	"travelling now", "pre-departure", "at enquiry stage", "recently returned"
Home town	"in Bournemouth", "Poole", "Salisbury"

GOOD TO KNOW

Chips combine with AND. Each chip narrows the result, so more chips means fewer (more precise) customers — if you get no results, remove a chip. The small text box above the table does a quick *name/city* filter on the rows already loaded; the smart bar is what actually queries your whole database. **Email all / Add to journey** act on the whole filtered view, unless you tick specific rows first — then they act only on your selection.

Top tip: Save “Booked 18+ months ago, no contact” and work it weekly — that's repeat business most agencies leave on the table.

Set-up note: Saving segments needs the one-time segments migration. Until then, everything else works and Save segment tells you exactly what to run.

4 Customer 360

Everything about one household on a single page — history, intelligence and the next move.

Customer 360 — brief, predictions and Luna's next steps with action buttons. Illustrative figure.

What's on the page

- **Brief** — a short, plain-English summary of who they are and how they book.
- **Predictions** — three cards (explained below).
- **Timeline** — every email, chat, call and note in one thread, newest first.
- **Next steps** — the best actions right now, each with a Do button.
- **Trips, household, preferences and compliance** panels down the right.

What the three predictions mean

Card	What it tells you	How it's worked out
Opportunity	How likely they are to book again soon	From their booking cadence and recency. Needs 3+ past bookings; below that it says “insufficient history”.
Trip match	A destination idea that fits them	From their trip history, tags and recorded preferences.
Risk	Anything to handle before booking	From passport validity vs planned travel, GDPR consent and any contact flags. Calculated, never guessed.

Actions you can take

Button	What it does
Refresh brief	Regenerates Luna's brief and predictions from the latest data.
Draft a reply	Opens the inbox focused on their most recent message.
Add note	Adds an internal note that appears in the timeline.
Schedule call	Creates a follow-up task (and opens your booking page if configured).

Next steps · Do

Performs the suggested step — creates the task or opens the reply.

GOOD TO KNOW

The **household graph** shows the whole family with ages and any allergy flags, so you never miss a child's nut allergy on a booking. The **compliance panel** is worked out live from the contacts (GDPR consent, marketing opt-in, passport validity) — there's nothing to maintain. **Preferences** can be edited as you learn them, and they feed the trip-match prediction. Notes you add appear in the timeline immediately.

Top tip: Skim the brief and timeline before every call. Mentioning their last trip or a child's name from memory turns a booking into a relationship.

5 Inbox

Every inbound message, triaged by Luna and ready to answer — with reply options written for you.

Inbox — triage lanes, the focused message and Luna's ranked reply drafts. Illustrative figure.

How to use it

1. Work the **Today** lane first. Select a message to see the full email and Luna's read.
2. Switch between the **ranked drafts** — each has a one-line rationale for its trade-off.
3. **Send as is**, **Edit before sending**, or **Draft with Luna** for fresh, grounded options.

GOOD TO KNOW

What the lanes mean. Luna sorts each message by urgency: **Today** = needs a same-day reply (a worry, a time-sensitive enquiry); **This week** = important but not urgent; **Later** = nice-to-have. The percentage on each draft is Luna's *confidence that draft fits this customer and message* — highest first. The three-pane layout (list · message · customer card) stacks into a single column on phones.

Top tip: The drafts differ in tone on purpose. Pick the one whose rationale matches the relationship, not just the fastest one.

6 Trips pipeline

A Kanban board of every trip, from first enquiry to safely returned, so nothing stalls.

Trips — drag cards between stages; column counts show pipeline health. Illustrative figure.

What each stage means

Stage	The trip is...
Enquiry	A new request, not yet quoted.
Quoted	Priced and sent to the customer; awaiting a decision.
Booked	Confirmed and paid (or deposit taken).
Pre-departure	Booked and departing soon — final-details territory.
Travelling	The customer is away now.
Returned	Home — time for a welcome-home and feedback.
Cancelled	An exit, kept off the board but reachable via the toggle.

How to use it

1. **Drag a card** between columns as a trip moves on (or use the stage dropdown on touch/keyboard).
2. Read the **column totals** to see value sitting at each stage.
3. Click a card to open the customer behind the trip.

GOOD TO KNOW

Moving a card saves instantly. If a save fails (e.g. you briefly lose connection) the card **snaps back** to where it was and shows a message, so the board is always honest — just try the move again.

Top tip: If cards pile up in Quoted, that's your hottest follow-up list — pair it with a journey so Luna chases them automatically.

7 Journeys (auto-pilot)

The heart of “AI doing the work nobody has time for”. A journey is a rule: when something happens, Luna does a follow-up.

Journeys — active rules, who's eligible now, and the activity log. Illustrative figure.

How to use it

1. Click **Install starter journeys** to add the four proven rules.
2. Use **Run now** on a journey (or **Run all active**) to act on who's eligible; **Pause** any you don't want.
3. Review the **What Luna has done** feed — drafts are marked **awaiting review** and never send themselves.
4. You can also enrol a hand-picked group from a segment (Customers → **Add to journey**).

Starter journey	Fires	Luna does
Pre-departure check-in	10 days before	Task: confirm details
Welcome home	3 days after return	Draft welcome email
Passport expiry warning	< 6 months to expiry	Task: flag passport
Re-engage quiet customers	12 months no contact	Draft re-engagement

GOOD TO KNOW

“**Eligible now**” is how many customers currently match the rule. **Run** acts on them and logs each one. Running twice never doubles up — Luna remembers who it has already actioned, so a customer never gets the same task or draft twice. A **paused** journey isn't evaluated at all. Email actions are always created as **drafts for review**, never sent automatically — so auto-pilot is safe to leave on.

Top tip: Turn journeys on one at a time and watch the feed for a few days. Once you trust one, leave it running and let it protect your repeat revenue.

8 Tasks

Your single work queue. Everything Luna queues from journeys — plus follow-ups you create — lands here.

Tasks — open work bucketed by due date, with journey-created items badged. Illustrative figure.

How to use it

1. Tick the checkbox to **complete** a task, or **Snooze** it (it returns in three days).
2. Filter by **Open / Snoozed / Done / All**; reopen anything you need back.
3. Journey-created tasks carry a badge and link straight to the customer.

GOOD TO KNOW

Open tasks are grouped by due date — **Overdue, Today, This week, Later** and **No date** — so the most pressing work is always on top. Tasks come from three places: journeys, the customer-360 buttons (Schedule call, next-step Do), and anything you add yourself. The Dashboard's "needs you today" figure includes your open tasks.

Top tip: Clear Overdue and Today every morning and the whole CRM stays honest.

9 Reports

The numbers that matter, computed live from your trips and customers.

Reports — headline figures, destinations and new-vs-repeat, with an instant range toggle. Illustrative figure.

How to use it

1. Flip the range between **This year** / **Last 12 months** / **All time** — it updates instantly.
2. Use source attribution to decide where your next marketing pound goes.

GOOD TO KNOW

Figures are **gross booking value**. A trip counts as “booked” revenue once it reaches Booked, Pre-departure, Travelling or Returned; Enquiry and Quoted count as **open pipeline**. There's deliberately no margin/commission report yet, because commission isn't captured in the data — an honest revenue view beats a column of estimates.

Top tip: Watch new-vs-repeat over time. A growing repeat share is the clearest sign your journeys and follow-ups are working.

Your workspace, your team, and how Luna behaves.

Panel	What's there
Workspace	Agency name, brand colour, region/timezone and plan.
Team	The people with access and their roles.
Luna AI	The house style Luna always writes in, the models behind each feature, and a live feature-status list.
Integrations	Connection status for your database, the AI engine and hosting.
Compliance & data	Live GDPR consent, marketing opt-in and passport-expiry figures across all customers.

GOOD TO KNOW

Some items are shown as **read-only / managed** for now (for example inviting teammates) — they're labelled honestly rather than looking editable. The **Integrations** panel is the quickest way to confirm whether live AI is switched on for your workspace.

Top tip: Check the Compliance panel before any marketing send — it shows at a glance how many customers have consented.

11 Luna AI & Ask Luna

Luna is built to be helpful and safe. Here's exactly what it does, what it won't do, and how to get great answers from it.

The four rules Luna always follows

- **It never invents facts.** Briefs and drafts use only the data on file; if Luna doesn't know something, it leaves it out rather than guessing.
- **Numbers are computed, not guessed.** Risk and opportunity come from real arithmetic on real fields.
- **Nothing sends itself.** Luna drafts and queues; a human reviews and sends.
- **It writes in your voice.** UK English, warm and direct, no marketing filler.

Asking Luna a question

Open Ask Luna (the button bottom-right, or **⌘/Ctrl + K**) and type a question in normal English. Luna finds the answer in your data and shows results you can click straight through to.

Try asking...	You'll get
"Who's travelling in the next 3 months?"	A list of customers with upcoming departures
"Who's going to Spain?"	Everyone with a Spain trip on file
"How much have we booked this year?"	A revenue figure with the trips behind it
"Which customers have gone quiet?"	Past customers with no recent contact
"Who's recently returned?"	Households back from a trip, ready for a welcome-home
"Tell me about Sarah Thompson"	A full profile: who they are, value, trips, risks
"Build me a report for this year"	Booked revenue, pipeline, new customers, top destinations

Follow-ups and acting on answers

- **Ask a follow-up.** Luna remembers the thread: after "who's travelling next month?" you can just ask *"and just the VIPs?"*. Click **New question** to start fresh.
- **Act on the answer.** When the answer is a list of customers, buttons appear underneath: **Email all**, **Add to journey** and **Add tag** — the same actions as the customer list, one click from the answer.

GOOD TO KNOW

Live AI (briefs, reply drafts, Ask Luna, smart segments) needs an AI key configured on your workspace — your admin can check this in **Settings** → **Integrations**. If it's off, the app still works: briefs show a prepared summary, the inbox shows curated drafts, and the customer search falls back to a rules-based parser. Either way, nothing is lost and nothing breaks.

Top tip: Treat Luna like a brilliant new colleague — let it do the first draft and the legwork, and bring your judgement to the final send. That combination is where the time savings come from.

The everyday jobs, start to finish. Follow these and most “how do I...?” questions answer themselves.

Handle a new enquiry

1. Open the **Inbox**; the new enquiry will be in the **Today** lane.
2. Read Luna's read, pick a reply draft, edit if needed and send (or **Draft with Luna** for fresh options).
3. Open the customer (mini-card → **Open full record**) and check the brief.
4. On the **Trips** board, move their trip to **Quoted** once you've priced it.

Prepare a customer who's about to travel

1. The **Pre-departure check-in** journey will have created a task — open it from **Tasks**.
2. Open the **Customer 360**; check the **Risk** card for passport issues and the household graph for allergies.
3. Use **Draft a reply** or **Schedule call** to confirm final details.
4. Move the trip to **Travelling** when they depart.

Re-engage customers who've gone quiet

1. In **Customers**, search “booked over a year ago, no contact”.
2. **Save segment** so it's one click next week.
3. Either **Email all** for a personal note, or **Add to journey** → Re-engage quiet customers to have Luna draft each one.
4. Review the drafts in **Tasks** / the journey feed, then send.

Run a group campaign

1. Build the audience with a smart search (e.g. “families who've been to Greece”).
2. Tick the rows you want, or act on the whole view.
3. **Add tag** to label them for tracking, then **Email selected** or **Draft outreach**.
4. Later, search by that tag to measure who booked.

After a customer returns

1. The **Welcome home** journey drafts an email three days after return — find it in the journey feed.
2. Review, personalise and send; ask how it went.
3. **Add note** on their record with anything to remember for next time.

13 Top 10 tips

The moves that separate “using Luna Work” from “getting the most out of it”.

#	Tip
1	Start every day on the Dashboard and act on the briefing line first.
2	Clear the Inbox Today lane and overdue Tasks before anything else.
3	Open the Customer 360 before every call — the brief is your 10-second catch-up.
4	Save a segment for quiet past customers and work it weekly.
5	Turn on Journeys one at a time, then let them run — repeat revenue on auto-pilot.
6	Watch the Trips board for cards stuck in Quoted; that's your hottest follow-up list.
7	Use Ask Luna (⌘/Ctrl+K) instead of building a report for quick questions.
8	Always add a note after a call so the next person sees the full picture.
9	Pick the reply draft whose rationale matches the relationship, not just the fastest one.
10	Tag campaign audiences so you can measure who booked later.

Manager's tip: Make tips 1, 2 and 5 a team standard. They take minutes a day and protect the revenue that's easiest to lose — your existing customers.

The questions people ask first — answered, so you don't have to ask anyone.

My search returned no customers. Why?

Filter chips combine with AND, so each one narrows the result. Remove a chip (click its ×) to widen the search, or click Clear and start again.

The AI brief says it isn't configured, or drafts look generic.

Live AI needs a key on your workspace (check Settings → Integrations, or ask your admin). Without it the app still works and shows prepared content.

Did that email actually send?

No — Luna only ever creates a **draft**. You review and send it from your mail client. Journey emails sit as drafts marked “awaiting review”.

Why didn't a journey fire for a particular customer?

Three common reasons: they don't currently match the trigger; Luna has already actioned them (it never repeats); or the journey is paused. Paused journeys aren't evaluated.

“Save segment” shows a message about a migration.

Saving segments needs a one-time database table. Ask your admin to run the segments migration; everything else works meanwhile.

I dragged a trip and it jumped back.

The save didn't go through (usually a brief connection blip). The board snaps back so it stays accurate — just make the move again.

Where did my note go?

Notes appear in the customer's **timeline** immediately, newest at the top, alongside emails and calls.

How do I bring customers over from my old CRM?

Export them as a CSV, then Customers → Import CSV. Luna maps the columns automatically (you can adjust any of them), shows a preview, and skips duplicates — so re-running the same file never double-imports.

How do I remove the demo data?

The demo households are sample data. Your admin can clear them when you're ready to go live with real customers.

What's the difference between Quick find and Ask Luna?

Quick find (⌘/Ctrl+P) jumps you to a record or page by name. Ask Luna (⌘/Ctrl+K) answers questions about your data.

Does it work on my phone?

Yes. The layout adapts: the sidebar becomes a menu button (top-left) and the screens stack into a single column.

How do I switch to dark mode?

Use the sun/moon button at the bottom-left of the sidebar. It's remembered on that device.

Can I see this guide inside the app?

Yes — the in-app tour (sidebar → Take a tour) walks through every screen and links you to it.

Plain-English definitions of the terms you'll see across Luna Work.

Household	A customer unit — a family, couple or individual you serve, with one or more contacts.
Contact	A person within a household (lead, partner, child, dependant).
Customer 360	The single page showing everything about one household.
Brief	Luna's short written summary of a customer — who they are and how they book.
Segment	A saved or ad-hoc group of customers defined by a smart search.
Token / chip	One filter in a smart search (e.g. "Greece", "Family"). Chips combine with AND.
LTV	Lifetime value — the total a household has spent with you.
Pipeline	All your trips arranged by stage, from Enquiry to Returned.
Stage	Where a trip is in its lifecycle (see §6).
Lane	An inbox priority bucket: Today, This week or Later.
Triage	Luna sorting inbound messages by urgency into lanes.
Journey	An auto-pilot rule: a trigger (when) plus an action (what Luna does).
Trigger	The condition that makes a journey act (e.g. 10 days before departure).
Eligible	A customer who currently matches a journey's trigger.
Task	A piece of follow-up work in your queue, from a journey or created by you.
Prediction	A computed signal on the 360: Opportunity, Trip match or Risk.
Preference	A recorded customer like/dislike (airline, room, dietary) that feeds matches.
Compliance	Consent and document status: GDPR, marketing opt-in, passport validity.

Shortcut	Action
⌘/Ctrl + P	Open Quick find (jump to any customer, trip or page)
⌘/Ctrl + K	Open Ask Luna
↑ ↓ then Enter	Move through results and open
← →	Move through the product tour
Esc	Close any overlay (tour, palette, Ask)

A simple daily rhythm

1. Open the **Dashboard** and read the briefing.
2. Clear the **Today** inbox lane and overdue **Tasks**.
3. Glance at **Trips** for anything stalled in Quoted.
4. Once a week, work a saved **segment** of quiet past customers.
5. Let **Journeys** handle the routine in the background.
